Computational Methods for Biomarker Identification in Complex Disease

by

Amin Ahmadi Adl

For the Ph.D. degree in Computer Science & Engineering

One of the challenging problems in systems biology with high-throughput measurements is discovering the important components involved in development and progression of complex diseases, which may serve as biomarkers for accurate predictive modeling and as targets for therapeutic purposes. In this dissertation we propose novel computational methods for biomarker identification to take into account non-linearity and heterogeneity of complex diseases.

ENB 313

THE PUBLIC IS INVITED

Examining Committee

Lingling Fan, Ph.D., Chairperson

Xiaoning Qian, Ph.D., Major Professor

Lawrence O. Hall, Ph.D.

Dmitry Goldgof, Ph.D.

Bo Zeng, Ph.D.

Hye-Seung Lee, Ph.D.

Robert Bishop, Ph.D.
Dean, College of Engineering

Dwayne Smith, Ph.D.
Dean, Office of Graduate Studies

Disability Accommodations:

*If you require a reasonable accommodation to participate, please contact the
Office of Diversity & Equal Opportunity at 813-974-4373 at least five (5) working days prior to the event.*
