

Do not bring supplies into isolation!

Supplies needed in isolation (e.g., clippers, saline, syringes, gauze, needles, scales, gavage needles, etc.) must be dedicated to the room and first decontaminated via Vaporized Hydrogen Peroxide (VHP).

If there are special supply items you need that are not currently in the room, contact a Comparative Medicine staff member for assistance with scheduling VHP decontamination (done every Friday in the isolation prep room), or with chemically decontaminating the items.

Do not bring items into isolation from other SRB animal areas!
